New Safety Recall Advanced Communication – S85120216

FCA US LLC (“FCA US”) announced a safety recall on certain 2016 model year (WD) Dodge Durango and (WK) Jeep Grand Cherokee vehicles equipped with a 3.6L engine (sales code ERC).

Some of the above vehicles may have had the fuel rail crossover tube damaged during the engine manufacturing process. A damaged fuel rail crossover tube could leak fuel and cause an underhood engine fire without warning.

FCA US will conduct a voluntary safety recall to inspect the fuel rail crossover tube on all involved vehicles. Engines found with a damaged fuel rail crossover tube will have the fuel rail assembly replaced.

VINs identified as being involved in this campaign are currently live and searchable under Recall S85.

Dealers will be notified of the launch of this safety recall by way of established methods used in the past. **Remedy communication is estimated to be available during late December 2016 or early January 2017.**

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries on involved vehicles.
