***** IMPORTANT SAFETY RECALL ***
(PROGRAMA DE SEGURIDAD IMPORTANTE)**

**Safety Recall Notice 16S24 / NHTSA Recall 16V-345
Aviso de Revisión de Seguridad 16S24**

2014 F-150 Ford Truck
Your Vehicle Identification Number (VIN):

This notice is sent to you in accordance with the National Traffic and Motor Vehicle Safety Act.

Ford Motor Company has decided that a defect which relates to motor vehicle safety exists in your vehicle, with the VIN shown above.

We apologize for this situation and want to assure you that, with your assistance, we will correct this condition. Our commitment, together with your dealer, is to provide you with the highest level of service and support.

What is the issue?

On your vehicle, the brake master cylinder may allow brake fluid to leak into the brake booster. If the brake fluid reservoir is depleted below a pre-determined level, you will be alerted that brake system service is required by a combination of the following:

- An audible chime
- A full screen message center alert
- Illumination of the red brake warning indicator (shown to the left).

If the brake fluid reservoir is further depleted through continued vehicle operation, you may experience a change in brake pedal travel and feel, and reduced brake function in the front wheels. Brake function in the rear wheels is unaffected by this condition. Reduced brake function in the front wheels can extend stopping distance, increasing the risk of a crash.

Parts are now available to repair your vehicle.

What will Ford and your dealer do?

Ford Motor Company has authorized your dealer to replace your vehicle's brake master cylinder free of charge (parts and labor).

How long will it take?

The time needed for this repair is less than one-half day. However, due to service scheduling requirements, your dealer may need your vehicle for a longer period of time.
