VOLUNTARY SAFETY RECALL CAMPAIGN
OCCUPANT CLASSIFICATION SYSTEM REPROGRAMMING

CAMPAIGN ID #: R1609
NHTSA #: 16V-244
APPLIED VEHICLE: 2016 Maxima (A36)
2013-2016 Altima (L33)
2014-2016 Rogue (T32)
2015-2016 Murano (Z52)
2015-2016 Murano Hybrid (Z52)

Check Service COMM to confirm campaign eligibility.

INTRODUCTION
Nissan is conducting a Voluntary Safety Recall Campaign on certain specific Nissan Vehicles, listed in APPLIED VEHICLES above, to reprogram the Airbag Diagnostic Sensor Unit and Occupant Classification System (OCS) control unit. This service will be performed at no cost to the customer for parts or labor.

IDENTIFICATION NUMBER
Nissan has assigned identification number R1609 to this campaign. This number must appear on all communications and documentation of any nature dealing with this campaign.

DEALER RESPONSIBILITY
It is the dealer’s responsibility to check Service Comm for the campaign status on each vehicle falling within the range of this voluntary recall which for any reason enters the service department. This includes vehicles purchased from private parties or presented by transient (tourist) owners and vehicles in a dealer’s inventory. Federal law requires that new vehicles in dealer inventory which are the subject of a safety recall must be corrected prior to sale. Failure to do so can result in civil penalties by the National Highway Traffic Safety Administration. While federal law applies only to new vehicles, Nissan strongly encourages dealers to correct any used vehicles in their inventory before they are retailed.

NOTE: If you believe that a described condition may apply to a particular vehicle, DO NOT assume that it does. See your Nissan dealer to determine if this applies to your vehicle.
CAMPAIGN INFORMATION

Front Passenger Air Bag Status Light

Performing the procedures in the bulletin (campaign R1609) changes the operation of the passenger air bag status light.

- After performing this campaign, the passenger air bag status light will be ON (illuminated) when the front passenger seat is empty.

Air Bag Warning Light

This campaign does not change the operation of the air bag warning light

REQUIRED SPECIAL TOOL J-51594 (OCS Reprogramming Cable)

- One J-51594 OCS reprogramming cable has been supplied to each dealer. Additional cables can be obtained from Tech-Mate at 1-800-662-2001.
Check Service COMM campaign ID # R1609 to confirm the vehicle you are working on requires this campaign.

For 2013 Altima, confirm that PC214 (NTB13-033) has been performed if required.

Reprogram the Airbag Diagnostic Sensor Unit.

Reprogram the OCS Control Unit.

Provide the customer with a printed copy of FRONT PASSENGER AIR BAG STATUS LIGHT OPERATION (see page 17)
1. Make sure ASIST has been synchronized to the current date and all updates have been installed.

   NOTE: The PC automatically gets applicable reprogramming software during ASIST synchronization.

2. Open the vehicle hood, connect GR8 and set to ECM Power Supply Mode.
3. Turn the ignition ON, engine OFF / not Ready.
4. Turn hazards ON.
5. Connect the CONSULT-III plus VI (C-III plus) to the vehicle.
6. Connect the VI to the CONSULT PC with a USB cable.
7. Start the CONSULT PC, open ASIST and then select “R1608 & R1609 OCS Reprogram” on ASIST under Specialty Tools (Figure 1).

CAUTION:
- Connect the GR8 to the 12V battery and select ECM Power Supply Mode. If the vehicle battery voltage drops below 12.0V or above 15.5V during reprogramming, the Airbag Diagnostic Sensor Unit (ADSU) may be damaged.
- Be sure to turn OFF all vehicle electrical loads. If a vehicle electrical load remains ON, the ADSU may be damaged.
- Be sure to connect the AC Adapter. If the CONSULT PC battery voltage drops during reprogramming, the process will be interrupted and the ADSU may be damaged.

Figure 1
8. Read the on screen **CAUTION** statement before proceeding.

9. Select **Accept**.

10. Select VI-2 from the drop down list and then **Next**.

11. Select **Reprogramming**.
12. Select **AIRBAG**.

13. Is the screen in Figure 6 displayed?
   - **NO**: Proceed to step 14.
   - **YES**:
     a. Select **End** and discontinue airbag reprogramming.
     b. Proceed to **OCS Control Unit Reprogram**.

14. Confirm that the Battery Voltage is between 12.0V and 15.5V.
   - If the Battery Voltage is not between 12.0V and 15.5V, resolve before proceeding.

15. Select **Start** and then proceed to page 7.
• **REPROGRAMMING PROGRESS** screen will be displayed (Figure 8).

• Reprogram will take approximately 3 minutes.

• Once the reprogramming has finished the screen in Figure 9 will be displayed.

• **WARNING**: Airbag control unit damage may occur if reprogramming is interrupted.

---

16. Confirm that the “Software Version(Before)” and “Software Version(After)” are different.

17. Select **End**.

18. Save the confirmation page, print and attach it to the repair order.

Leave the ignition ON and proceed to **OCS Control Unit Reprogram** on the next page.
OCS Control Unit Reprogram

NOTE: In this Service Procedure, OCS is sometimes referred to as ODS.

1. Install the driver for the J-51594 OCS reprogramming cable as follows:
   a. Keep the PC connected to the internet.
   b. Connect the J-51594 OCS reprogramming cable to the PC USB port.
   c. Wait 1 minute, the drivers will install automatically.

   NOTE: Steps 1 and 2 above are only required the first time this procedure is performed. It is recommended that they be performed at the beginning of each day to confirm you have the latest software installed in your PC.

2. Turn the ignition ON, engine OFF / not Ready (if not still ON) and turn ON the hazard warning flasher lights (if not still ON).

3. Connect the J-51594 OCS reprogramming cable:
   • Connect to the vehicle’s DLC connector and the PC USB port.
   • Make sure the cable is securely connected at both ends.

4. Prepare the vehicle for OCS Reprogramming as follows:
   • Level the vehicle.
   • No objects on the passenger seat.
   • No occupants in the vehicle – including the servicing technician.
   • PC is outside of the vehicle on a suitable support.
     ➢ Do not set the PC on the vehicle.
   • Do not touch the vehicle during the OCS Reprogramming.
   • Minimize vibrations of the vehicle.
5. Open ASIST (if not still open).

6. Select “R1608 & R1609 ACU Reprogram” on ASIST under Specialty Tools (Figure 11).

**NOTE:** If you get a black message screen as shown in Figure 12, this indicates that the reprogramming cable is not connected, or the cable driver did not install correctly.

a. Close ODS Repro.

b. Close ASIST.

c. Start over from step 1 on page 8.
7. Select **Start Repro**.

**NOTE:** If the error message “an error occurred on connection” displays:

a. Disconnect the J-51594 OCS reprogramming cable, both ends.

b. Reconnect the cable; make sure it is securely connected at both ends.

---

8. Turn the ignition ON (engine OFF / not Ready).

9. Select **OK**.

- After selecting OK in Figure 14, the OCS reprogramming will start.

- Items 1 through 4 (Figure 15) will likely complete quickly.

- If the OCS reprogramming stops (displays NG) at item 1, 2, 3 or 4, refer to Figures 20 through 23 on pages 13 and 14.
10. Cycle the ignition OFF > ON.

11. Select **OK**.

- After selecting OK in Figure 16, the OCS reprogramming will likely complete items 5 through 7 quickly (see “Complete” screen, Figure 18 below).

- If the OCS reprogramming stops (displays NG) at item 5, 6 or 7, refer to Figures 24 through 26 on pages 15 and 16.

12. When this screen displays (Figure 18), OCS reprogramming is complete.

13. Select **OK**.
14. Close the program (click on the red X in the upper right corner).

15. Turn the ignition OFF.

16. Disconnect the J-51594 OCS reprogramming cable.

17. Turn the ignition ON and observe the air bag warning light and the front passenger air bag status light:
   - The air bag warning light should illuminate for 7 seconds and then go out.
   - The front passenger airbag status light should illuminate for 7 seconds and then either stay illuminated or go out, depending on the occupation of the front passenger seat.

**NOTE:** If the air bag warning light or the front passenger airbag status light does not operate as described above, there may be an issue not covered by this campaign. Refer to ASIST and the appropriate ESM for additional diagnostic and repair information.

**OCS Reprogramming is Complete**

**NOTE:**
- Zero Point Reset was included in the reprogramming – it is not necessary to perform as a separate step.
- Figures 20 through 26 on pages 13 through 16 are provided as reference if the OCS reprogramming stops (displays NG) at one of the items (1-7).
# APPENDIX

- **#1 - If Connect indicates NG:**
  
a. Click OK on the accompanying error message.

b. Turn the ignition OFF.

c. Close ODS Repro (click on the red X in the upper right corner).

d. Restart from step 1 on page 8.

- **#2 - If Read EEPDATA indicates NG:**
  
a. Click OK on the accompanying error message.

b. Turn the ignition OFF.

c. Close ODS Repro (click on the red X in the upper right corner).

d. Restart from step 1 on page 8.
• #3 - If Write EEPDATA indicates NG:
  a. Click OK on the accompanying error message.
  b. Turn the ignition OFF.
  c. Close ODS Repro (click on the red X in the upper right corner).
  d. Restart from step 1 on page 8.

• #4 - If Check EEPDATA indicates NG:
  a. Click OK on the accompanying error message.
  b. Turn the ignition OFF.
  c. Close ODS Repro (click on the red X in the upper right corner).
  d. Restart from step 1 on page 8.
• #5 - If Reconnect indicates NG:
  a. Click OK on the accompanying error message.
  b. Turn the ignition OFF.
  c. Close ODS Repro (click on the red X in the upper right corner).
  d. Restart from step 1 on page 8.

• #6 - If Zero Reset indicates NG:
  a. Click OK on the accompanying error message.
  b. Cycle the ignition OFF > ON.
     • If needed, retry ignition OFF > ON 5 times.
  c. If Zero Reset still indicates NG, close ODS Repro (click on the red X in the upper right corner), and restart from step 1 on page 8.
• #7 - If Read EEPROM indicates NG:
  a. Click OK on the accompanying error message.
  b. Turn the ignition OFF.
  c. Close ODS Repro (click on the red X in the upper right corner).
  d. Restart from step 1 on page 8.

</tbody>
</table>
FRONT PASSENGER AIR BAG STATUS LIGHT OPERATION

NOTE: Please print this page and place a copy in the vehicle.

Recall Campaign R1609 changes the operation of the passenger air bag status light.

- The passenger air bag status light will now be ON (illuminated) when the front passenger seat is empty.

Below is additional information regarding the operation of the passenger air bag status light.

The front passenger seat is equipped with an occupant classification sensor (weight sensor) that turns the front passenger air bag on or off depending on the weight applied to the front passenger seat. The status of the front passenger air bag (ON or OFF) is indicated by the front passenger air bag status light which is located on the instrument panel. After the ignition switch is placed in the “ON” position, the front passenger air bag status light on the instrument panel illuminates for about 7 seconds and then turns off or remains illuminated depending on the front passenger seat occupied status. The light operates as follows:

<table>
<thead>
<tr>
<th>CONDITION</th>
<th>DESCRIPTION</th>
<th>PASSENGER AIR BAG INDICATOR LIGHT</th>
<th>FRONT PASSENGER AIR BAG STATUS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>Empty front passenger seat</td>
<td>ON (illuminated)</td>
<td>INHIBITED</td>
</tr>
<tr>
<td>Nobody/Somebody</td>
<td>Bag or Child or Child Restraint or Small Adult in the front passenger seat</td>
<td>ON (illuminated)</td>
<td>INHIBITED</td>
</tr>
<tr>
<td>Adult</td>
<td>Adult in front passenger seat</td>
<td>OFF (dark)</td>
<td>ACTIVATED</td>
</tr>
