### What is the problem?

The rustproof coating on the lift gate stay dampers of the subject vehicles, applied to the end of the external cylinder, may not provide sufficient protection from corrosion. Salt water intrusion to the inside of the end cover may cause the end of the cylinder to become corroded. Over time, increased corrosion may cause it to break as the lift gate is operated. The lift gate could drop suddenly, and the broken parts may injure people near the vehicle.

Your Mazda dealer will replace the lift gate stay dampers (both right and left) with improved ones. The repair will be performed free of charge, and should take approximately one hour to complete; however, it may take more or less time depending on the service workload at your Mazda dealership.
