July 7, 2017

SUBJECT: Explanation for vehicle increase update on recall SC0402, NHTSA ID16V-156

This is to confirm reasons for the increase in vehicles from sixty-seven (67) to seventy-five (75) vehicles on recall SC0402. The original number reported was based on the number of vehicles originally manufactured with the two piece shaft that was in service.

The new count represents the original 67 plus additional vehicles that were added as they either received a two piece-steering shaft through an aftermarket part sell, or were manufactured with a two piece shaft and interim repair (adding an additional roll pin) and then required the final repair (replacement with a one piece shaft).

Out of the 8 that were added, 6 of the 8 have already been repaired.

Best Regards,
