 Not sequential**Description of Defect :**

Description of the Defect : Daimler AG ("DAG), the manufacturer of Mercedes-Benz vehicles, has determined that on certain GLE/GLS-Class (166 platform), GLE coupe (292 platform) and E-Class 4MATIC (207/213 platforms) vehicles, the electric power steering connector might be insufficiently sealed against water entry.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : If the connector is insufficiently sealed, moisture might enter into the electric power steering control unit. In this case, the control unit signal might be interrupted and subsequently the steering power assist would be deactivated. Depending on the traffic situation, this could increase the risk of a crash.

Description of the Cause : Due to a production deviation at the supplier, a certain batch of connectors might not meet the requirements regarding moisture intrusion.

Identification of Any Warning that can Occur : A warning message in the instrument cluster will alert the driver if the power steering assist is deactivated.

Supplier Identification :**Component Manufacturer**

Name : Delphi Deutschland GmbH

Address : Delphiplatz 1
Wuppertal FOREIGN STATES 42119

Country : Germany

Chronology :

In May 2016, DAG initiated investigations after the power steering assist deactivated on a vehicle while undergoing an internal quality test including exposure to water. It was determined that water had entered the electric power steering control unit due to a leaking connector.

In the second half of 2016, joint investigations with the supplier of the affected connector were conducted in order to identify the root cause for the leakage on the connector. It was determined that a deviation in the connector injection molding process caused an incorrect shape in one of the pin housings, which allowed the leak to occur.

Further investigations were performed to identify the potentially affected production batches of the connector, and subsequently to identify the potentially affected vehicles.

In late 2016, investigations of the possible consequences of a leaking connector were conducted. It was

determined that water ingress into the control unit can only occur on electric power steering racks manufactured by one specific supplier.

In the beginning of April 2017, DAG determined that a potential safety risk cannot be ruled out.

Description of Remedy :

Description of Remedy Program : An authorized Mercedes-Benz dealer, will replace the connector and check the electric power steering on the affected vehicles. If necessary, the electric power steering rack will also be replaced. Pursuant to 49 C.F.R. § 577.11(e), MBUSA does not plan to provide notice about pre-notice reimbursement to owners since all involved vehicles remain covered under the new vehicle warranty.
