Description of Defect:

Description of the Defect: Fine hairline cracks can appear, after an extended period of use, on the filter

flange of the fuel pump on the affected vehicles.

As a result, a very small quantity of fuel can seep out causing a fuel odor.

FMVSS 1: NR FMVSS 2: NR

Description of the Safety Risk: Fuel leakage in the presence of an ignition source may cause a risk of fire.

Description of the Cause: External aging exposure and oxidization reduces the component strength over

an extended vehicle life. Additionally, fuel components intrude into the fuel filter flange material under pressure from the inside and cause tension within

the component.

Porsche believes that the combination of both such factors may, over time, eventually lead to the formation of small cracks, allowing fuel to seep from the

fuel filter flange.

that can Occur:

Identification of Any Warning Fuel odor will be noticeable to customers.

Name: Continental Automotive GmbH

Address: Sodener Strasse 9

Country: Germany

Chronology:

February 2017 - NHTSA forwarded 7 VOQ complaints to Porsche Cars North America and also to Volkswagen Group of America, referring to failures which appeared to be similar to those reported under Audi recall 20W9. In June 2017 Volkswagen and Porsche each began to conduct a 90-day field investigation to determine whether 4-bar fuel pumps may also be involved. For Porsche, these vehicles included 2003 - 2006 MY Porsche Cayenne sport utility vehicles.

On September 13, 2017 the matter was presented in Porsche's Product Safety committee and a determination of defect was made.

Description of Remedy:

Description of Remedy Program: The vehicles will be recalled to the workshop. Fuel filter flanges will be

exchanged with newer filter flanges and a protective film will be fitted to

the parts.

There are no plans for customer reimbursement.

How Remedy Component Differs New part contains an additional protective film, which protects the area of

from Recalled Component: the filter flange from external influences and prevents the formation of

small cracks.

Identify How/When Recall Condition All Porsche Cayenne vehicles of model years 2003 through 2006 are was Corrected in Production: potentially affected, inasmuch as there was no correction within the production process for these vehicles. With the start of the production of the newer Cayenne (E1 II generation) in MY 2008, a different filter flange was introduced in production, and such vehicles are not affected (please note - there were no MY 2007 Cayenne variants offered in the U.S. or

Canada).
