Description of Defect :

Description of the Defect : According to Kidde's Safety Defect Report (17E062): "The fire extinguishers may become clogged or require excessive force to activate. In certain models, the nozzle may detach from the valve assembly with enough force that it could cause injury and also render the product inoperable."

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : According to Kidde's Safety Defect Report (17E062): "If a fire extinguisher does not function properly, it is possible that someone could be injured or killed in a fire."

Description of the Cause : According to Kidde's Safety Defect Report (17E062): "There are two failure modes for the Plastic Handle extinguishers. First, the fire extinguisher may become clogged (preventing complete discharge) or require excessive force to activate. This may occur when the user depresses and quickly releases the lever. This typically occurs if a user depresses the lever for less than 1 second, emitting a small amount of powder or air, and releases the lever. Second, in certain models the nozzle may detach from the valve assembly with enough force that it could cause injury and fail to discharge.

For the Pindicator Extinguishers, excessive force may be required to activate the extinguisher."
