EVAP System Upgrade Lamborghini Aventador

Automobili
Lamborghini America LLC

Dear Lamborghini Sales and Service Manager,

In the course of continuous product monitoring and internal tests, Automobili Lamborghini S.p.A. has determined that, should the fuel tank be overfilled during refueling, in certain situations, liquid fuel could reach the carbon canister and the purge valves could cause fuel vapors to not be treated properly.

Under certain vehicle operating conditions, for example, over revving the engine with the vehicle stopped and in neutral, these improperly treat fuel vapors may possibly come in contact with hot gases. Especially if combined with a not approved aftermarket exhaust system, this could lead to risk of fire.

For safety reasons, these vehicles must therefore be upgraded to the latest technical features. Should you have a vehicle in stock included in the VIN range of affected vehicles which needs to be upgraded to the latest EVAP system version, **please stop sales of such vehicles immediately until the recall campaign has been performed.**

VIN Range of affected vehicles:

Beginning: ZHWEC1476CLA00091 Ending: ZHWET3ZD1HLA05975

The draft instructions for upgrading the vehicles are already available on the Dealer Portal at the page "Service and Recall Campaigns".

2200 Ferdinand Porsche Drive
Herndon, VA 20171
