

Questions and answers

Lamborghini Aventador (Coupè And Roadster), Veneno Coupé and Roadster, Aventador J - model year 2012 – 2017

“EVAP system upgrade”

■ What is the issue with the affected vehicles?

Under certain conditions, the EVAP system may not properly treat fuel vapors.

■ What is the cause of this condition?

In the event that the fuel tank is overfilled during refueling, or, under certain conditions and / or maneuvers, liquid fuel could reach the carbon canister. If purge valves are reached by fuel, this could affect functionality of the fuel EVAP system. This is worsened in case of winter fuel usage.

■ What effect does the condition have?

With improperly treated fuel vapor, particular maneuvers, such as over revving the engine with the vehicle stopped in neutral, could possibly cause contact between fuel vapor and hot gasses. Especially if combined with a not approved aftermarket exhaust system this could lead to risk of fire.

■ How can the condition be identified?

Malfunction Indicator Lamp (MIL) is ON or the engine stalls at idle or strong fuel smell outside the car

Is there any risk for the car occupants?

Automobili Lamborghini S.p.A. is not aware of any accidents or other incidents resulting in injury to a person or damage to property.
