**Statement by American Honda Regarding  
Expansion of Fuel Feed Pipe Recall: 2017 Honda CR-V**

- Approximately 8,100 CR-V vehicles added to the expanded July 2017 recall in the U.S.
- Fuel feed pipes will be replaced, free of charge  
No crashes, fires or injuries have been reported

TORRANCE, Calif. – Dec. 7, 2017 – Honda will expand the July 2017 recall of CR-V vehicles from the 2017 model year, adding approximately 8,100 vehicles. In total, approximately 32,200 vehicles will now be recalled to replace their fuel feed pipes, free of charge, in the United States. Honda has not received any reports of crashes, fires or injuries related to this issue.

During manufacturing, the supplier may have used an incorrect die to create the end form on the fuel feed pipe, which is needed to secure the connection to the fuel feed hose under the center of the vehicle. If the end form was not manufactured correctly, the feed pipe and the feed hose may not be completely connected or may disconnect once the fuel lines become pressurized, resulting in a fuel leak. A fuel leak can cause the engine to stall, increasing the risk of a crash, or if there is a fuel leak in the presence of an ignition source, an increased risk of a fire.

After announcing the original recall in July 2017, Honda received three reports of fuel leaks involving fuel feed pipes not originally identified as defective by the supplier. A subsequent investigation identified additional lots of fuel feed pipes that could be affected by this issue, prompting the expansion of the recall.

Honda is announcing this recall to encourage owners of affected vehicles to take them to an authorized dealer as soon possible for the free recall repair. Mailed notification to owners of the expanded group of affected vehicles will occur in mid-January 2018. Owners of 2017 CR-Vs can also determine now if their individual

vehicles will require repair by visiting [www.recalls.honda.com](http://www.recalls.honda.com) or by calling (888) 234-2138.
