### **Engine software update Lamborghini Aventador MY 2012 to 2018**

Dear valued Lamborghini Sales and Service Manager,

In the course of continuous product monitoring and internal tests, Automobili Lamborghini S.p.A. has determined that The estimation of the fuel flow through the purge valves made by the engine software may lead to a irregularity of the idle with consequent possible engine stall.

For affected vehicles under certain driving conditions (with the accelerator pedal released and below 2000 rpm in conjunction with automatic shifts from high to low gears, in the idle approach) an engine stall event may happen without warning.

The engine can switch off at low rpm therefore compromising the servo steering and brake booster functionalities. However, it is still possible to restart the engine after the problem occurrence.

For all the reasons listed above, these vehicles must therefore be upgraded to the latest technical features.

The instructions for upgrading the vehicles are available on the Lamborghini Dealer Portal section "Service and Recall Campaigns".

In order to further support you in answering questions to your customers, we are attaching the FAQ (Frequent Asked Question) you must follow to. Since these activities are extremely important, we are confident you will make every effort to ensure that the vehicles are upgraded in the shortest time possible.
