Re: FA/FB Valve Adjustment Shim KIT - SOA635315

To support the completion of the WTY-84 recall, special kit SOA635315 consisting of a variety of valve adjustment shims for the FA/FB engine is being direct shipped to each retailer. This kit consists of containers labeled with the part numbers for each shim size and at least 2 each of the commonly used sizes.

The purpose of the kit is to lessen the need to order shims to complete the recall work. Its contents should be inventoried as parts to track and control on hand values of each shim. **The kit itself is not orderable and the kit part number should not be charged to any claim. The individual part numbered shims CAN be charged to claims when used as part of the WTY-84 repair.**

The retailers' parts dept is responsible to restock the kit as shims are used.
