SAFETY RECALL J02

****New J02 Job Aid****

Safety Recall J02 – *Job Aid Distribution Notice* Certain 2013 Model Year Scion FR-S Engine Valve Spring Replacement

To help dealer Technicians better understand how to apply FIPG to the timing chain cover while performing the remedy for the J02 safety recall or during a regular service repair on an FR-S engine, full-size versions of the Job Aid of the timing chain cover (previously provided through TIS) is being sent to dealers.

Dealers will be receiving 2 copies of the full-size version of the Job Aid that can be used as a practice sheet for FIPG application on the timing cover and can act as a visual aid during the repair process.

As a practice tool, FIPG can be applied directly to the Job Aid and removed so it can be reused as needed. However, it is recommended to spray the Job Aid with WD-40 or equivalent prior to FIPG application and allow the FIPG material to completely cure before attempting to remove it.

Refer to the Dealer Letter and Technical Instructions on TIS for additional information.

Thank you for your cooperation.
