IMPORTANT SAFETY RECALL

Frame Bracket

Dear [Name],

This notice is sent to you in accordance with the National Traffic and Motor Vehicle Safety Act.

FCA has decided that a defect, which relates to motor vehicle safety, exists in certain [2009 – 2012 (DS) RAM 1500 Pickup] vehicles.

The front fuel tank strap on your truck ^[1] may become loose due to the frame bracket corrosion. With the front fuel tank strap detached, the rear strap primarily secures the fuel tank, however, the front of the fuel tank may be allowed to lower several inches. The vehicle driver may notice a noise, the strap, or fuel tank hanging down, frame corrosion, or may be informed during an oil change/state inspection. Detachment of the front fuel tank strap could potentially allow the front of the fuel tank to make contact with the ground, increasing the risk of a fuel leak. A fuel leak in the presence of an ignition source could result in a fire.

YOUR VEHICLE HAS ALREADY BEEN REMEDIED

According to our service records, the fuel tank strap reinforcement bracket on your vehicle has already been installed. Therefore, your vehicle has been remedied and this safety recall does not need to be performed.

This notification is provided for your records only. There is nothing more that you need to do.
