## CONSUMER ADVISORY

### PLATFORM MODULAR CONTROL PROGRAMMING UPDATE

Dear KME Customer:

The programming for the modular platform control in your KME platform aerial truck will be updated as the remedy to NHTSA recall **18V393**. The program update stops active movement of the aerial that was being directed by the platform modular control if the modular control loses communication with the master controller. In addition, messages were added to the displays alerting the operators of the loss of platform modular control communication. See below for details.

- A new *Critical Alert* has been added to indicate that communication with the platform modular tip control joysticks has been lost. The alert will appear regardless of which screen is currently being viewed and can be dismissed using the F4 button on the display. Dismissing the alarm DOES NOT indicate the fault is cleared, it only acknowledges the alarm.

- Even after the Critical Alert is dismissed, a reminder alert will appear on each screen to advise the operator that communication has not been restored. These will remain until communication is restored. See examples on the next page.

## CONSUMER ADVISORY

- The alerts are triggered whenever the ladder is powered and the master controller does not receive the expected signal input from the platform modular tip control joysticks.
- If the alert is activated, the operator should ensure that the joystick tether plug is fully seated in the receptacle.
- Ladder control from the turntable console is not affected by any of these conditions or alerts.

**⚠ WARNING**

**Operator Attention Required**

**Trained operator must remain at primary controls any time there are personnel on the device.**

**Do not operate this device using platform or tip controls without a trained operator at the primary controls at all times.**

**Be alert for changing conditions and be prepared to remove device personnel from danger.**

**Failure to comply may injure or kill.**
