Attention: It is a violation of Federal law for a dealer to deliver a new motor vehicle or any new or used item of motor vehicle equipment (including a tire) covered by this notification under a sale or lease until the defect or noncompliance is remedied.

This bulletin contains an inspection procedure for vehicles in dealer inventory. Vehicles that pass this inspection procedure can be delivered to a customer. Vehicles that do not pass this inspection procedure are on stop delivery effective September 26, 2018, and will remain on stop delivery until this bulletin is updated with the remedy and the final recall repair is performed on the vehicle. Dealers are to hold failed inspection warranty claims until the bulletin is updated with the remedy and the revised service parts are available.

All involved vehicles that are in dealer inventory must be held and not delivered to customers, dealer traded, or used for demonstration purposes until the repair contained in this bulletin has been performed on the vehicle.

Condition: General Motors has decided that certain 2018 - 2019 Cadillac CT6 and Escalade ESV vehicles; Chevrolet Suburban and Volt vehicles; and GMC Yukon XL vehicles may fail to conform to S7.1.1.5(a) of Federal/Canada Motor Vehicle Safety Standard No. 208, “Occupant crash protection” and S7.1.1.5(a) of Technical Standards Document (TSD) No. 208 of Canada Motor Vehicle Safety Standard (CMVSS) No. 208, “Occupant Protection in Frontal Impacts”. In these vehicles, a child seat can be installed in the rear seats using either the LATCH anchorage system or the vehicle's seatbelts. To permit the installation of a child seat using a seatbelt, the vehicle's rear-seatbelt retractor assemblies are equipped with automatic-locking retractors, or ALRs, that are designed to lock the seatbelt when it is fully pulled out of the retractor. In some of these vehicles, an ALR may not lock the seatbelt when it is fully pulled out of the retractor. An unlocked seatbelt, if used to secure a child seat, will fail to properly secure a child seat, increasing the risk of injury to a child-seat occupant in a crash. This condition is detectable during child-seat installation and does not impact the seatbelt’s emergency-locking mechanisms, which automatically lock the seatbelt during crash events.

Correction: Dealers will inspect rear-seatbelt retractors to verify proper ALR function and replace the retractor if necessary.

Parts

It is estimated that 70% of the involved vehicles will pass the inspection and not require part replacement. For those vehicles that do not pass the inspection, the bulletin will be updated when the remedy and required parts become available, at which time these vehicles can be repaired.

* Only use for vehicles that pass inspection. Hold failed inspection warranty claims until bulletin is updated with the remedy and the revised service parts are available.
Service Procedure – Escalade ESV, Suburban and Yukon XL

Inspection Video

Review the inspection video before beginning the service procedure.

1. Remove the middle third row seatbelt buckle from the headliner seatbelt bezel.

2. Pull the seatbelt out of the retractor and install the small latch plate into the detachable anchor (1). Install the large latch plate into the buckle as if buckled over an occupant (2).
3. Pull the complete length of the seatbelt out until it reaches a hard stop.

**Important:** When performing the following steps, do not allow more than the specified length to retract, this will ensure the manufacturer-built threshold to lock isn’t passed.

4. Allow approximately 12 inches (30 cm) of the belt to slowly retract back into the retractor (you will hear a ratcheting sound).

5. Firmly tug on the belt and verify that it locks and cannot be pulled out of the retractor.

6. Allow another 12 inches (30 cm) to retract into the retractor, firmly tug on the belt and verify that it locks and cannot be pulled out of the retractor.

7. Allow another 12 inches (30 cm) to retract into the retractor, firmly tug on the belt and verify that it locks and cannot be pulled out of the retractor.

8. Disconnect the large latch plate from the buckle and allow the seatbelt to retract.

9. Reconnect the latch plate into the buckle.

10. Repeat steps 3-9 six times.

- **If the seatbelt retractor locks without releasing six times in succession, no further action is required,** the belt system is performing as designed.

- **If the seatbelt fails to lock at any time during the six cycles, the seatbelt retractor assembly requires replacement.** Revised service parts are currently NOT available. This bulletin will be updated once revised service parts are available. Other vehicle seating positions and/or the vehicle’s LATCH anchorage system may be appropriate for use with a customer’s child seat until the final recall remedy is performed. If a customer has questions regarding whether another seating position or the vehicle’s LATCH anchorage system is appropriate
for use with the customer’s child seat, please refer the customer to the instructions provided in vehicle’s owner’s manual and the child-seat owner’s manual.

11. Disconnect both latch plates and reinstall the seatbelt buckle into the bezel (1) and ensure it is secured in the anti-rattle receiver (2).

Service Procedure – CT6

Inspection Video

CT6SEATBELT.mp4

Review the inspection video before performing the service procedure.

1. Locate the middle rear seatbelt.

2. Pull the seatbelt out of the retractor and insert the latch plate into the buckle.
3. Pull the complete length of the seatbelt out until it reaches a hard stop.

**Important:** When performing the following steps, do not allow more than the specified length to retract, this will ensure the manufacturer-built threshold to lock isn't passed.

4. Allow approximately 12 inches (30 cm) of the belt to slowly retract back into the retractor (you will hear a ratcheting sound).

5. Firmly tug on the belt and verify that it locks and cannot be pulled out of the retractor.

6. Allow another 12 inches (30 cm) to retract into the retractor, firmly tug on the belt and verify that it locks and cannot be pulled out of the retractor.

7. Allow another 12 inches (30 cm) to retract into the retractor, firmly tug on the belt and verify that it locks and cannot be pulled out of the retractor.

8. Disconnect the latch plate and allow the seatbelt to fully retract.

9. Repeat steps 2-8 six times.

- **If the seatbelt retractor locks without releasing six times in succession, no further action is required**, the belt system is performing as designed.

- **If the seatbelt fails to lock at any time during the six cycles, the seatbelt retractor assembly requires replacement.** Revised service parts are currently NOT available. This bulletin will be updated once revised service parts are available. Other vehicle seating positions and/or the vehicle’s LATCH anchorage system may be appropriate for use with a customer’s child seat until the final recall remedy is performed. If a customer has questions regarding whether another seating position or the vehicle’s LATCH anchorage system is appropriate for use with the customer’s child seat, please refer the customer to the instructions provided in vehicle’s owner’s manual and the child-seat owner’s manual.
Review the inspection video before performing the service procedure.

1. Locate the driver side rear seatbelt.

2. Pull the seatbelt out of the retractor and insert the latch plate into the buckle.
3. Pull the complete length of the seatbelt out until it reaches a hard stop.

**Important:** When performing the following steps, do not allow more than the specified length to retract, this will ensure the manufacturer-built threshold to lock isn’t passed.

4. Allow approximately 12 inches (30 cm) of the belt to slowly retract back into the retractor (you will hear a ratcheting sound).

5. Firmly tug on the belt and verify that it locks and cannot be pulled out of the retractor.

6. Allow another 12 inches (30 cm) to retract into the retractor, firmly tug on the belt and verify that it locks and cannot be pulled out of the retractor.

7. Allow another 12 inches (30 cm) to retract into the retractor, firmly tug on the belt and verify that it locks and cannot be pulled out of the retractor.

8. Disconnect the latch plate from the buckle and allow the seatbelt to fully retract.

9. Repeat steps 2-8 six times.

10. Repeat steps two through nine on the passenger side rear seatbelt.

   - **If the seatbelt retractor locks without releasing six times in succession, no further action is required,** the belt system is performing as designed.

   - **If the seatbelt fails to lock at any time during the six cycles, the seatbelt retractor assembly requires replacement.** Revised service parts are currently NOT available. This bulletin will be updated once revised service parts are available. Other vehicle seating positions and/or the vehicle’s LATCH anchorage system may be appropriate for use with a customer’s child seat until the final recall remedy is performed. If a customer has questions regarding whether another seating position or the vehicle’s LATCH anchorage system is appropriate
for use with the customer’s child seat, please refer the customer to the instructions provided in vehicle's owner's manual and the child-seat owner's manual.

**Dealer Responsibility – For USA & Export (USA States, Territories, and Possessions)**

It is a violation of Federal law for a dealer to deliver a new motor vehicle or any new or used item of motor vehicle equipment (including a tire) covered by this notification under a sale or lease until the defect or noncompliance is remedied.

The US National Traffic and Motor Vehicle Safety Act provides that each vehicle that is subject to a recall of this type must be adequately repaired within a reasonable time after the customer has tendered it for repair. A failure to repair within sixty days after tender of a vehicle is prima facie evidence of failure to repair within a reasonable time. If the condition is not adequately repaired within a reasonable time, the customer may be entitled to an identical or reasonably equivalent vehicle at no charge or to a refund of the purchase price less a reasonable allowance for depreciation. To avoid having to provide these burdensome remedies, every effort must be made to promptly schedule an appointment with each customer and to repair their vehicle as soon as possible. In the recall notification letters, customers are told how to contact the US National Highway Traffic Safety Administration if the recall is not completed within a reasonable time.

**Dealer Responsibility – All**

All new, used, GM Certified Used, courtesy transportation vehicles, dealer shuttle vehicles, etc. in dealers’ possession and subject to this recall must be held and inspected/repaired per the service procedure of this bulletin before customers take possession of these vehicles. Involved vehicles must be held and not delivered to customers, dealer-traded, released to auction, used for demonstration, or any other purpose.

All GM Certified Used vehicles currently in the dealers’ inventory within the Certified Pre-Owned Inventory System (CPOIS) will be de-certified and must be held and remedied per the service procedure in this bulletin. Upon submitting an accepted/paid warranty transaction in the Global Warranty Management (GWM) system, the vehicle can be re-certified for sale within the CPOIS system, or once again be used in the CTP program.

Dealers are to service all vehicles subject to this recall at no charge to customers, regardless of mileage, age of vehicle, or ownership, from this time forward.

Customers who have recently purchased vehicles sold from your vehicle inventory, and for which there is no customer information indicated on the dealer listing, are to be contacted by the dealer. Arrangements are to be made to make the required correction according to the instructions contained in this bulletin. Recall follow-up cards should not be used for this purpose, since the customer may not as yet have received the notification letter.

In summary, whenever a vehicle subject to this recall enters your vehicle inventory, or is in your dealership for service in the future, you must take the steps necessary to be sure the recall correction has been made before selling or releasing the vehicle.

**Dealer Reports**

For dealers with involved vehicles, a listing with involved vehicles has been prepared and will be provided to U.S. and Canadian dealers through the GM GlobalConnect Recall Reports, or sent directly to export dealers. The listing may contain customer names and addresses obtained from Motor Vehicle Registration Records. The use of such motor vehicle registration data for any purpose other than follow-up necessary to complete this recall is a violation of law in several states/provinces/countries. Accordingly, you are urged to limit the use of this report to the follow-up necessary to complete this recall.

**Courtesy Transportation – For USA & Canada**

Courtesy transportation is available for customers whose vehicles are involved in a product program and still within the warranty coverage period. See General Motors Service Policies and Procedures Manual, Sections 1.4 and 6.1.10, for courtesy transportation program details.

**Customer Notification**

**USA & Canada - General Motors will notify customers of this recall on their vehicle.**

**Export - Letters will be sent to known owners of record located within areas covered by the US National Traffic and Motor Vehicle Safety Act.**
