### NHTSA/MORGAN "GROTE ELECTRICAL HARNESS" CHASSIS VIN CHECK

Morgan has identified an issue with the Electrical Foreign to Domestic Converter Harnesses manufactured by Grote and installed on certain Morgan truck bodies mounted on Isuzu, Chevrolet, Freightliner, GMC, Kenworth, Mercedes, Mitsubishi and Peterbilt chassis. Some of these converter harnesses have experienced a failure due to water ingress. The water ingress may cause the rear turn signals to malfunction in several different ways including becoming inoperable, bleed through of low intensity light to the rear tail/tum signal lamp, or other turn signal or 4-way flasher malfunctions.
