Description of Defect:

Description of the Defect: A loose connection exists between the BIM/BIR and attached battery cables.

FMVSS 1: NR FMVSS 2: NR

Description of the Safety Risk: The loose connection not only causes premature failure of the BIM/BIR, but it

can also create arcing, which can lead to a fire and property damage.

Description of the Cause: BIM/BIR are attached to battery cables and torqued per the specifications. During mounting of the BIM/BIR in the motorhome and connection of the other end of the cables to the chassis battery, there is a possibility of the battery cable becoming loose on the BIM/BIR side depending on the orientation of the

BIM when mounted and the ring connectors to bend.

Chronology:

7/2/2019 TMC was made aware of a fire incident.

8/8/19 Cause and origin investigation with all parties present to determine cause of fire.

8/9/19 In speaking to our fire investigator, it was determined that the connection on the Battery Isolation Manager (BIM) to the battery cables was loose creating an arc.

8/12/19 Worked with TMC Engineering a scope of units to inspect in the field that had the same BIM or a Battery Isolation Relay (BIR) (same wiring).

8/15/19 Results from the field inspections determined that we had a problem with loose connections on the battery cable.

8/16/19 TMC Safety Committee met and determined that a recall was needed

8/26/19 Continued field inspections to determine final scope.

9/4/19 Final scope determined.

Description of Remedy:

Description of Remedy Program: TMC will provide instructions to dealers on how to replace the BIM/BIR

with a Trombetta solenoid.

How Remedy Component Differs Remedy component uses a Trombetta solenoid.

from Recalled Component :

Identify How/When Recall Condition An ECN change was implemented on 9/11/19 changing the BIM/BIR to a
