Descriptive Information : Some 2014-2019MY Ram 1500/1500 Classic ("Ram 1500") vehicles equipped with the 3.0L Eco Diesel engine, may have been built with Exhaust Gas Recirculation ("EGR") coolers that are susceptible to thermal fatigue. Thermal fatigue may cause the cooler to crack internally over time.

The suspect period began on June 12, 2013, when RAM 1500 3.0L Eco Diesel production with the suspect EGR coolers started, and was concluded on October 23, 2019, when production of Ram 1500/1500 Classic vehicles with 3.0L Eco Diesel engines built with the suspect EGR coolers ended. Engine assembly plant records were used to identify which vehicles received suspect EGR coolers.

Similar vehicles not included in this recall were not equipped with 3.0L Eco Diesel engines built during the suspect period.

 Not sequential**Description of Defect :**

Description of the Defect : Thermal fatigue may cause the cooler to crack internally over time. An EGR cooler with an internal crack will introduce pre-heated, vaporized coolant to the EGR system while the engine is running. In certain circumstances, this mixture interacts with other hydrocarbons and air in the system, potentially resulting in combustion within the intake manifold, which may lead to a vehicle fire.

Description of Remedy :

Description of Remedy Program : FCA US will conduct a voluntary safety recall on all affected vehicles to replace the EGR cooler with a new EGR cooler (part number 68483334AA) that is not susceptible to thermal fatigue. In the event the intake manifold is damaged, the intake manifold will be replaced.

FCA US has a longstanding policy and practice of reimbursing owners who have incurred the cost of repairing a problem that subsequently becomes the subject of a field action. To ensure consistency, FCA US, as part of the owner letter, will request that customers send the original receipt and/or other adequate proof of payment to the company for confirmation of the expense.
