What is the issue? Over time, the fuel supply line for the high pressure fuel pump may become porous, resulting in a fuel odor or a fuel leak. Leaking fuel, in the presence of an ignition source, may result in a fire.

What will we do? To correct this defect, your authorized Audi dealer will install a fuel pressure damper in the low pressure fuel supply located inside the fuel tank. This work will take up to two (2) hours to complete and will be performed for you free of charge. Please keep in mind that your dealer may need additional time for the preparation of the repair, as well as to accommodate their daily workshop schedule.

What should you do? Please contact your authorized Audi dealer without delay to schedule this recall repair. For your convenience, you can also visit www.audiusa.com and click on the “Find a Dealer” link to locate a dealer near you and schedule this service.

To help facilitate this repair, if possible please have the fuel level in your vehicle at one-quarter tank or less on the day of repair.

Precautions you should take Customers who notice a fuel odor in the vehicle are advised to contact an authorized Audi dealer without delay and arrange to have the vehicle inspected.
