Description of Defect :

Description of the Defect : According to the equipment defect notification 19E-080 filed by Takata, certain Takata Non-Azide Driver Airbag Inflators have the potential to exhibit elevated moisture ingress due to insufficient aluminum tape seal. This can lead to slow deployment, which may result in insufficient protection by the driver frontal airbag, or there may be over-aggressive combustion creating excessive internal pressure when the driver frontal airbag is deployed. Very high internal pressure could result in the body of the airbag inflator rupturing upon deployment.
