Dear valued Lamborghini Sales and Service Manager,

In the course of continuous product monitoring and internal tests, Automobili Lamborghini S.p.A. has determined the possibility that a few Lamborghini Aventador SVJ does not fully meet the requirements of Vehicle Safety Standards.

On the affected vehicles, the front frame suspension arm anchor bolt torque could be insufficient due to potentially damaged aluminum frame threads caused by an improper rework tool that may have been used by the parts supplier during manufacturing.

If this condition is present in the vehicle, the suspension arm joint could be affected and it may collapse resulting in loss of control of the vehicle, increasing the risk of a crash and injury to the occupants.

For all the reasons listed above, these vehicles must therefore be reworked. The repair instructions are now available on the HUB section "Service and Recall Campaigns".

In order to further support you in answering questions to your customers, we are attaching the FAQ (Frequent Asked Question) you must follow to. Since these activities are extremely important, we are confident you will make every effort to ensure that the vehicles are repaired in the shortest time possible.
