What your recall means and how will it be repaired.

General Motors has decided that a defect, which relates to motor vehicle safety, exists in certain 2019–2020 model-year Chevrolet Bolt EV vehicles. When the rear window in these vehicles is opened (i.e., cycled down), the window may contact and damage the cable connected to the rear door's inside handle. If, over time, that cable becomes sufficiently damaged by repeated window movement, the rear door may unintentionally open when opening the rear-door window. A damaged cable may also render the rear door's inside handle inoperable. If a rear door opens unexpectedly while driving, it could increase the risk of injury to rear-seat occupants.

Sincerely,

Regina Carto
