Dear NHTSA:

SUBJECT: Status Report - Defect and Recall Campaign # 20V345

Please accept this letter as our first quarterly status report for the subject recall campaign.

In this recall campaign we identified one (1) individual semi-trailer that is being recalled to correct a problem with the Load rating Decal that was applied to the trailer when it was manufactured.

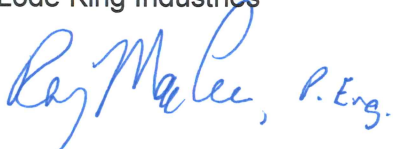

This trailer has been located in Texas. We have been in communication via email and telephone with this end user. We have provided him with the correct load rating decal for that trailer. He has also confirmed that the new load rating decal has, in fact, been installed on the affected trailer.

We are pleased to report 100% success in completing this recall.

Since this recall is completed in the United States, it seems pointless to continue to submit status reports after this point. We request that you also consider this the last status report we will submit for this specific recall campaign.

Feel free to contact the undersigned if you require any further information regarding this recall campaign.

Sincerely,
Lode King Industries

Roy MacLean, P.Eng.
Director of Engineering
