Description of Defect :

Description of the Defect : According to the axle supplier, Terran Axle LLC, "[i]n the assembly of certain axles, a certain number of spindle nuts were not torqued to prescribed standards resulting in insufficiently torqued (loose) spindle nuts." See Recall No. 21E067.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : According to the axle supplier, Terran Axle LLC, "insufficiently torqued

Description of the Safety Risk : spindle nuts may lead to higher than normal axle vibration possibly resulting in overheated bearings and bearing failure as well as potential smoking of the axle from friction and improper tire wear and wheel performance. Axle, tire or wheel failure may affect vehicle stability or control, increasing the risk of a crash."

Description of the Cause : According to Terran Axle, this issue was caused by "[I]mproper torquing of spindle nut to prescribed levels.'

Identification of Any Warning that can Occur : Terran Axle has advised that this condition may develop without warning.

Involved Components :

Component Name 1 : Spindle Nut

Component Description : Spindle Nut (retains the hub assembly to the spindle)

Component Part Number : 020401

Supplier Identification :

Component Manufacturer

Name : Terran Axle LLC

Address : 1 Westbrook Corporate Center
Suite 300 Westchester Illinois 60154

Country : United States

Chronology :

On or about August 2, 2021, Peach Cargo was notified that Terran Axle LLC was conducting a recall of certain axles that were supplied to Peach Cargo. (Recall No. 21E067) Peach Cargo initiated an inquiry to determine the scope of the issue and to reconcile the list of affected axles against Peach Cargo's manufacturing records to identify potentially affected trailers.

Although Peach Cargo has not made an independent safety defect determination, it is filing this defect information report in response to Terran Axle's defect determination in Recall No. 21E067.

Peach Cargo has not received any reports of accidents or injuries related to the condition described in Terran Axle's notification.

Description of Remedy :

Description of Remedy Program : As described in Terran Axle's Part 573 Defect Information Report, "Terran Axle will notify all trailer manufacture customers, their dealers, and purchasers of trailers incorporating the axles subject to the inspection to determine whether spindle nuts are properly torqued. We mandate manual inspection of each spindle nut assembly (2 per axle) to ensure proper torqueing and, in the event that a spindle nut requires torqueing to meet prescribed standards, we provide detailed instructions and, for axles that have been in operation on a moving trailer and experience vibration, we will require the technician to confirm that the bearings have not been impacted and the axle is properly greased. In the event that bearings have been affected, we make provision for replacement of these bearings."

How Remedy Component Differs from Recalled Component : The remedy involves torqueing the spindle nut to the prescribed standards which facilitates proper operability of the axle and consequent wheel and tire function.

Identify How/When Recall Condition was Corrected in Production : Terran Axle advises that it inspected each trailer axle and, if a spindle nut was insufficiently torqued, the spindle nut was torqued to the prescribed standards.
