

New Safety Recall Advanced Communication – Y82

FCA US LLC (FCA US) has announced an equipment safety recall on certain Mopar Occupant Restraint Controllers (ORC).

REASON FOR THIS SAFETY RECALL

Customers may have purchased an ORC module that may have the incorrect software. The airbag warning indicator may not illuminate to notify the operator of possible compromised airbag system functionality. If specific ORC internal faults are active, then a diagnostic trouble code (DTC) will not be set and the airbag warning indicator may not illuminate. The internal faults will disable deployment of both the driver and passenger airbag squib and knee airbags. Reduced occupant protection in the event of a crash may result in an increased risk of injury to motor vehicle occupants.

SERVICE ACTION

FCA US will conduct a voluntary safety recall on all affected parts to repurchase suspect ORC modules. Dealers will be notified of the launch of this safety recall by way of established communication methods. This recall is estimated to launch in 4th Quarter of 2021.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
