Subject: REVISION – N212345941-01 - Safety Recall
High Voltage Battery May Melt or Burn
Multiple Sections Revised including Vehicle Preparation, Adjusting the
State of Charge, and WCAP Clarification

Models: 2020 – 2022 Chevrolet Bolt EV
2022 Chevrolet Bolt EUV

To: All General Motors Dealers

General Motors is revising Safety Recall N212345941-01 today. This Safety Recall includes select 2020 - 2022 model year Chevrolet Bolt EV & 2022 Chevrolet Bolt EUV VINs.

This bulletin has been revised in multiple areas, including the “Vehicle Preparation Before Entering the Repair Garage” section, the “Adjusting (Reducing) the SOC” section, and the Working Capital Assistance Program (WCAP) clarification. Please take the time to re-read the entire bulletin thoroughly. Please discard all previous copies of bulletin N212345941.

Please verify a VIN’s involvement in this field action by checking in IVH prior to doing any repairs. The Dealer Maxis App via Global Connect can be utilized to download a list of eligible ‘open’ VINs. Dealer Maxis should be queried at a minimum weekly for the most up-to-date information on all open field actions. IVH is the best source for individual VIN inquiries.

As additional VINs become eligible for repair, they will be closed in N212345940 and moved into N212345941. All other VINs will remain in “Incomplete-Remedy Not Available” status under N212345940 and will not be eligible for the final repair until GM informs dealers at a future date. WCAP is calculated from the “Release Date” on VINs in “Open” Status in IVH and will be adjusted as additional releases occur.

When making customer appointments, please remind the customer to **not charge** their vehicle 24 hours prior to their scheduled appointment.

Until recall repairs can be completed, customers should take the following interim steps:

1. Set their vehicle to a 90 percent state of charge limitation using Target Charge Level mode. Instructions on how to do this are available on (chevy.com/boltevreCALL). If customers are unable to successfully make these changes, or do not feel comfortable making these changes, customers should visit their Chevrolet EV certified dealer to have these adjustments completed.
2. Charge their vehicle more frequently and avoid depleting their battery below approximately 70 miles (113 km) of remaining range, where possible.
3. Continue to park their vehicles outside immediately after charging and not leave their vehicles charging indoors overnight.

IMPORTANT

To avoid warranty transaction rejections, dealers **MUST** record the warranty claim code provided on the Warranty Claim Code (WCC) screen. Labor code 9105933 - ZFA – Field Action Multimodule Coordinated Sequence **MUST** also be used, or the claim will reject.

Question and Answer Document (FAQs)

Attached to this message you will find a document that addresses the twelve most likely questions customers may have regarding this Safety Recall. Please use this information as an aid to confidently answer customer concerns.

Customer Letter Mailing

The customer letter mailing began on October 6, 2021 and will continue as VINs become eligible for the final repair.

Global Warranty Management (GWM)

The Required Field Action section on the IVH screen was first updated on October 7, 2021. Please verify a VIN's involvement in this field action by checking in IVH prior to doing any repairs. IVH is the best source for individual VIN inquiries.
