## **New Safety Recall Advanced Communication – Y58**

FCA US LLC (FCA US) has announced a safety recall on certain 2021 Model Year (LA) Dodge Challenger vehicles involving the Instrument Panel Cluster (IPC).

### **REASON FOR THIS SAFETY RECALL**

Some of the above vehicles have an Instrument Panel Cluster (IPC) that has an incorrect software version. Suspect vehicles included in this recall may not illuminate the required telltales. Failure to illuminate required telltales as appropriate may prevent the operator from receiving information regarding the status of vehicle safety systems.

The condition described above does not comply with Federal Motor Vehicle Safety Standard (FMVSS) 571.101 Controls and Displays S5.3 requires vehicles to "illuminate telltales and their identification sufficiently to make them visible to the driver under daylight and nighttime driving conditions."

### **SERVICE ACTION**

FCA US will conduct a voluntary safety recall on all affected vehicles to reprogram suspect instrument clusters with the correct software version. The remedy for this condition is not currently available. Dealers will be notified of the launch of this safety recall by way of established communication methods. This recall is estimated to launch in 3rd Quarter of 2021.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
