

New Safety Recall Advanced Communication – Y71

FCA US LLC (FCA US) has announced a safety recall on certain 2019 through 2021 Model Year (VM) Ram ProMaster City vehicles.

REASON FOR THIS SAFETY RECALL

Some of the above vehicles may have a Body Control Module ("BCM") diagnostic software issue that prevents the Instrument Panel Cluster ("IPC") from changing the frequency of the turn signal lamp IPC indicator when a turn signal bulb is inoperative. Vehicles operators may be unable to adequately signal their driving intentions, and be unaware that their intentions may not be adequately signaled, which can cause a vehicle crash without prior warning.

The condition described above does not comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 108 S9.3.6 Turn signal lamp failure. Failure of one or more turn signal lamps such that the minimum photometric performance specified in Tables VI or VII is not being met must be indicated by the turn signal pilot indicator by a "steady on", "steady off", or by a significant change in the flashing rate".

SERVICE ACTION

FCA US will conduct a voluntary safety recall to reprogram the Body Control Module. Dealers will be notified of the launch of this safety recall by way of established communication methods. This recall is estimated to launch in 3rd Quarter of 2021.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
