

New Safety Recall Advanced Communication – Y94

FCA US LLC (FCA US) has announced a safety recall on certain 2021 Model Year (JL) Jeep® Wrangler PHEV vehicles.

REASON FOR THIS SAFETY RECALL

After reaching 13,342 miles the odometers of these vehicles will no longer display the magnitude of its sensed characteristic (mileage). The vehicle operator will notice that the odometer value is not displayed. If this warning is not heeded, a missing odometer reading may lead to missed or delayed critical vehicle maintenance. Potential failed components, due to a lack of maintenance, may lead to a vehicle crash without prior warning.

Federal Motor Vehicle Safety Standard ("FMVSS") 571.101, Controls and Displays, Section 4, defines the odometer as an indicator that must display the magnitude of its sensed characteristic, which is defined under Safety Act 49 USC 32702 Definitions, as the distance driven.

SERVICE ACTION

FCA US will conduct a voluntary safety recall on all affected vehicles to update the IPC software on vehicles with less than 13,342 miles (21,473 kilometers). FCA US will replace the IPC on vehicles in which the mileage is not displayed. The remedy for this condition is not currently available. Dealers will be notified of the launch of this safety recall by way of established communication methods. This recall is estimated to launch in 4th Quarter of 2021.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
