Tiffin Recall # TIF-114

March 18, 2021

PowerGlide Chassis Valve Stem Stabilizers

Regarding VIN:

Dear Tiffin Motorhome Dealer,

Tiffin Motorhomes will be issuing a recall on certain 2021 Phaeton Motorhomes built on PowerGlide chassis only. These units will have the floor plan of 40IH or 44OH and will have been built between 01/18/2021 and 03/11/2021. These certain motorhomes have valve stem stabilizers that do not fit the wheel, which could potentially lead to a loss of tire pressure.

This letter is to remind you that according to NHTSA regulations, new motorhomes with open safety recalls cannot be sold until the recall has been repaired by an authorized service center.

Tiffin Motorhomes has a very limited supply of parts on hand to complete the recall. Parts have been ordered but due to delays in shipping, they have not yet arrived. Please call the recall department at 256-356-8661 extension 2176 to check on the availability of parts for any stock units you have that are sold before you are ready to deliver.

We regret any inconvenience this action may cause, but feel certain you understand our interest in motor vehicle safety.
