Description of Defect:

Description of the Defect: As a check of the suspension alignment of the rear axle was not included

originally when executing recall 42L1, this may result in displacement in the wheel alignment. The result could be premature and uneven wear of the tires

leading to a decrease of traction.

FMVSS 1: NR FMVSS 2: NR

Description of the Safety Risk: The tires might suffer from premature and uneven wear, which may lead to a

decrease of traction. In cases where the tires are worn to the carcass, this may

also cause a puncture. This could lead to a loss of tire pressure without warning, potentially causing a loss of vehicle control and even a crash.

Description of the Cause: Particular vehicles that have received recall 42L1 may have suffered

displacement in the wheel alignment as no check of suspension alignment of

the rear axle was performed after executing 42L1.

Identification of Any Warning The driver may notice a steering wheel misalignment when driving on a

that can Occur: straight road or the vehicle pulling to one side when braking or accelerating.

Upon visual inspection of the tread depth of the tires any wear can be checked.

Name: Audi AG

Address: Auto-Union-Str. 1

Ingolstadt 85057

Country: United States

Chronology:

May 28, 2021: Start of recall 42L1 in the US market

September / October, 2021: Field cases regarding premature and uneven tire wear after carrying out recall 42L1 were reported in the European markets leading to the start of investigation.

October 2021 - January 2022: Detailed analysis of root cause, possible influences and consequences and determination of affected population. On November 20, 2021 the repair instructions of 42L1 in the US market were adopted and a check of the suspension alignment for the rear axle was added.

January 19, 2022: The Audi Product Safety Committee determines that it cannot be completely ruled out that the rear axle in vehicles with recall 42L1 already executed is not within specification regarding the suspension alignment of the rear axle. The decision for a voluntary worldwide safety recall is made including all vehicles where 42L1 was executed without a suspension alignment of the rear axle.

Audi is not aware of any field cases in the United States.

Description of Remedy:

Description of Remedy Program: On the affected vehicles, the suspension alignment for the rear axle will be

checked and adjusted if necessary. Furthermore, the tires will be checked for premature and uneven wear due to a possible misalignment of the

suspension and will be replaced if necessary. Audi will offer a

reimbursement plan under this recall.
