Description of Noncompliance :

Description of the Noncompliance : Mercedes-Benz AG (“MBAG”) has determined that on certain Model Year (“MY”) CLA-Class (118 platform), GLE/GLS-Class (167 platform), A-Class (177 platform), C-Class (205 platform), E-Class (213 platform), E-Class Coupe/Convertible (238 platform), GLA/GLB-Class (247 platform), GLC-Class (253 platform), and CLS-Class (257 platform) vehicles, the function of the rearview camera might be impaired.

FMVSS 1 : 111 - Rear visibility

FMVSS 2 : NR

Description of the Safety Risk : In this case, the rearview image might not be displayed in the central display after engaging the reverse gear. Instead, the central display would continue to display the existing image or display a black screen with a message indicating the inoperability of the rearview camera system. There is no deactivation or freezing of the rearview camera image.

A rearview camera image that might not be available within 2.0 seconds (as required by FMVSS 111 S5.5.3) as the vehicle begins to back up might impair rear visibility which might increase the risk of a crash.

Description of the Cause : Due to a deviation in the development process of the supplier, the software for the rearview camera might not meet current production specifications.

Identification of Any Warning that can Occur : Before the issue occurs, the driver will not receive a warning due to the nature of the failure mechanism.

When the issue occurs, the driver might notice that the central display would

either continue to display the existing image or display a black screen with a message indicating the inoperability of the rearview camera.

Chronology :

In November 2018, MBAG launched initial investigations based on individual field reports regarding MB Van vehicles where customers allegedly experienced the subject condition outlined above. For this purpose, parts of affected MB Van vehicles were retrieved from the field and sent to the supplier for analysis. In parallel, the supplier started the development of a more robust software version. This new software was also made available in Passenger Cars series production from October 2019 onward. A further software release with additional improvements was released by the supplier and made available for series production beginning June 2020.

For much of 2020, MBAG operations were severely restricted due to the COVID-19 pandemic. As operations began to resume in the second half of 2020, the ongoing internal review and continuous market observation indicated that this issue might also affect Mercedes-Benz passenger cars.

Over the course of the next months, MBAG conducted further evaluations to identify potential effects in MB passenger cars including systematic testing.

While the subject issue could not be systematically reproduced, it was found that in isolated cases, vehicles that

had received the original software version showed the subject condition outlined above. In spring 2021, the ongoing testing indicated that also vehicles that had received the first improved software version during production, might be affected by the subject condition outlined above. Although the subject issue could still not be systematically reproduced, In late 2021, MBAG could not exclude the possibility that a deviation might be present in the passenger car rearview image software. Subsequently, MBAG determined the potentially affected vehicles in the field. In the beginning of 2022, detailed evaluations were performed to assess the extent to which the deviation might impact the specific regulatory requirements of the affected countries. Please see chronology supplement.

Description of Remedy :

Description of Remedy Program : An authorized Mercedes-Benz dealer will check the currently installed software and, if necessary, update the software of the rearview camera to current production specifications.

Pursuant to 49 C.F.R. § 577.11, MBUSA does plan to provide notice about pre-notice reimbursement to owners since most of the involved vehicles would have been previously subject to the condition described and customers who have already paid to have this recall condition corrected may be eligible to receive reimbursement.

How Remedy Component Differs from Recalled Component : Updated rearview camera software according to current production specifications.

Remedy Part:
Software Rearview Camera - A0009020660

Identify How/When Recall Condition was Corrected in Production : A change in the software of our supplier ensures that this issue can no longer occur from May 26, 2021 onwards.

Recall Schedule :

Description of Recall Schedule : Dealers will be notified of the pending voluntary recall campaign on April 15, 2022. Owners were notified of the voluntary recall campaign via interim letter on June 3, 2022. A Final letter was mailed on July 15, 2022 and July 29, 2022.
