Description of Defect :

Description of the Defect : Mercedes-Benz AG (“MBAG”), the manufacturer of Mercedes-Benz vehicles, has determined that on certain Model Year (“MY”) 2017-2022 CLA-Class, GLA-Class, GLE-/GLS-Class, SLC-Class, A-Class, AMG GT-Class, C-Class, E-Class, S-Class, SL-Class, , GLC-Class, CLS-Class , AMG GT 4-doors Coupe, GLE-Class Coupe, GLB-Class G-Class vehicles (117, 118, 156, 166, 167, 172, 177, 190, 205, 213, 217, 222, 223, 231, 238, 247, 253, 257, 290, 292, 293, , 463 platform), the communication module's SIM card software might inadvertently become disabled

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : Should this occur, the communication module would not be able to establish a connection with a mobile phone network. In this case, the manual as well as the automatic eCall function would not be available. Therefore, the condition may preclude or delay the arrival of emergency responders. This might increase the consequences of an injury following an emergency event

Description of the Cause : Due to an interaction between a SIM card security mechanism and the affected SIM profile, the SIM card software might inadvertently become disabled.

Identification of Any Warning that can Occur : The driver will not receive a warning due to the nature of the failure mechanism.

Chronology :

In February 2020, MBAG received a first isolated field complaint (outside US) regarding a disabled SIM card, in which the customer experienced issues with the Mercedes Me Connect functions. With the receipt of additional field complaints in the following months an investigation was launched together with the supplier of the communication module. In September 2020, the sub supplier of the SIM card was able to confirm that a triggered security mechanism was the root cause of the disabled SIM cards. Following this, the investigation focused on identifying what triggered the security mechanism. From May 2021, the SIM Card supplier focused on SIM cards for North America with a specific SIM software and performed extensive tests. In September 2021, the supplier was able to narrow down the root cause to the behavior of a specific SIM software based on

tests and field data. In the following month, the root cause was confirmed and an extensive analysis regarding potential effects was initiated and performed until February 2022. In March 2022, MBAG identified potentially affected vehicles with the affected SIM software.

On May 13, 2022, MBAG determined that a potential safety risk cannot be ruled out and decided to conduct a recall.

In the middle of June 2022, MBAG received an updated list of potentially affected SIM cards from the supplier and therefore reviewed the potentially affected vehicles. This analysis concluded that 56 additional vehicles in the U.S. have to be considered as potentially affected and have been included in the recall accordingly.

MBAG is currently aware of 191 field reports in the US that are related to this issue that were received from May 6, 2020 to May 16, 2022. MBAG has not received any reports of crashes, injuries, or property damage, associated with this issue. See chronology supplement.

Description of Remedy :

Description of Remedy Program : The supplier of the SIM card will update the SIM software of the communication modules on the affected vehicles. This update is planned to be performed over-the-air (“OTA”).
If the over-the-air update cannot be successfully completed, the customer will be notified and advised to visit an authorized dealer to have the update performed.

Pursuant to 49 C.F.R. § 577.11(e), MBUSA plans to provide notice about pre-notice reimbursement to owners since the involved vehicles would not have been previously subject to the condition described.
