Chronology :

A vehicle controls engineer submitted a report to GM's Speak Up For Safety (SUFS) program on October 6, 2022 to determine whether additional GM vehicles may be affected by a software issue that had been found in certain 2021 model year full-size sport-utility vehicles, resulting in GM recall No. 22V827. The body control module (BCM) software in those vehicles, under a combination of certain pre-conditions, could fail to deactivate the DRLs when the headlamps are on. GM opened an investigation on October 24, 2022.

GM's investigator identified additional models and model years with similar software to vehicles subject to Recall N22V27. Testing demonstrated the condition was present in the subject vehicles, while other vehicles were unaffected due to differences in software and/or hardware. On December 1, 2022, GM's Safety Field Action Decision Authority (SFADA) decided to conduct a recall for potential noncompliance with this standard.

Description of Remedy :

Description of Remedy Program : General Motors will update the software in the vehicles' Body Control Module (BCM) to correct the condition.
Pursuant to 49 C.F.R. § 573.13(d) (1), all covered vehicles are under warranty, so reimbursement is not offered.

How Remedy Component Differs from Recalled Component : The updated BCM software will correct the condition.

Identify How/When Recall Condition was Corrected in Production : Containment efforts were initiated on: 11/16/2022 at GM's Arlington plant, 11/22/2022 at the Fort Wayne plant, 12/01/2022 at the Lansing plant, 11/25/2022 at the Oshawa plant, 11/08/2022 at the Silao plant, and 11/30/22 at the Dong Yue plant.
