Date: June 08, 2022

Issue: The engine control unit in affected vehicles may contain a semiconductor that was not produced according to manufacturing specifications. The insulation layer that is required to prevent short circuits within the semiconductor may be missing on these semiconductors. If this condition is present in the vehicle, it might cause a failure of the affected semiconductor, thus influencing fuel injection and engine operation. This could lead to a stalling condition, which could increase the risk of a crash. The vehicle’s steering and braking support will remain fully functional, even if the engine were to switch off while the vehicle is moving.

- Repair:**
- REPAIR NOT YET AVAILABLE
 - Check daily campaign open inventory report or OMD for affected vehicles in inventory.

Notes: **IMPORTANT REMINDER: VEHICLES AFFECTED BY SAFETY & COMPLIANCE RECALLS**

New Vehicles in Dealer Inventory: It is a violation of federal law for a dealer to deliver a new motor vehicle or any new or used item of motor vehicle equipment (including a tire) covered by this notification under a sale or lease until the defect or noncompliance is remedied. By law, dealers must correct, prior to delivery for sale or lease, any vehicle that fails to comply with an applicable Federal Motor Vehicle Safety Standard or that contains a defect relating to motor vehicle safety.

Pre-Owned Vehicles in Dealer Inventory: Dealers should not deliver any pre-owned vehicles in their inventory which are involved in a safety or compliance recall until the defect has been remedied.
