Subject: Informal Notification - Upcoming Recall 22V-620 / 2022-459
Attachments: Cummins Letter to Rosenbauer_22E-063 Notification 04AUG22.pdf

Hello Valued Rosenbauer Dealers,

We have submitted our initial paperwork to NHTSA and Transport Canada regarding an upcoming recall initiated by Cummins for X12, X15 and L9 Engines that could have defective ECMs resulting in an unexpected stall of the engine. We have a total of 17 trucks impacted thus far for the US and Canada but note: **all will be remedied prior to leaving Rosenbauer unless we find out more trucks are involved.**

I have attached the notification letter we received from Cummins which will describe the safety risk. You can also access the US recall filing from Rosenbauer [at this link](#). At this time, we know we will be making a revision to our impacted make and models since we were still gathering information at the time of the recall. **The Cummins recall is not live in QuickServe Online** since Rosenbauer was given special approval to remedy our trucks before some of the general population. If you ask your Cummins representative about the recall, they may not know about it.

This email is to provide an informal notification. If all recalled trucks are remedied in Production, we are not required to formally notify the customers, but we will update our Dealers with an email. We will also enter the SRS tickets to track what was remedied. There is a small chance that the population will expand beyond the 17 trucks so if that happens, we will follow the proper procedures regarding notification with a remedy plan.

Feel free to reach out should you have any questions regarding recalls or technical service bulletins at recalls@rosenbaueramerica.com.

Thank you,

Lisa Sampson
