

New Safety Recall Advanced Communication – Z87

FCA US LLC (FCA US) has announced a safety recall on certain 2022 Model Year (DD) Ram 3500 Cab Chassis, (DJ) Ram 2500 Pickup, (DP) Ram 4500/5500 Cab Chassis, and (D2) Ram 3500 Pickup vehicles equipped with a 6.7L Diesel Engine.

VINs identified as being involved in this campaign are currently live and searchable.
Stop sale is in effect for the above-identified vehicles.

Vehicles impacted by a stop sale are eligible for reimbursement allowance through the Recall Floorplan Reimbursement Policy (RFPRP), which can be requested upon recall claim submission.

IMPORTANT: Some of the involved vehicles may be in dealer new vehicle inventory. Federal law requires you to complete this recall service on these vehicles before retail delivery. Violation of this requirement by a dealer could result in a civil penalty of up to \$21,000 per vehicle. Involved vehicles can be determined by using the VIP inquiry process.

REASON FOR THIS SAFETY RECALL

Some of the above vehicles may have been built with a Powertrain Control Module (PCM) with a misaligned capacitor which could create a short to ground and cause an internal PCM loss of communication. An internal loss of communication could result in a loss of motive power, which can cause a vehicle crash without prior warning.

SERVICE ACTION

FCA US will conduct a voluntary safety recall to replace and reprogram the PCM. Dealers will be notified of the launch of this safety recall by way of established communication methods. This recall is estimated to launch in 3rd Quarter of 2022.

We ask that you please take the time to ensure that your personnel are aware of this communication and are prepared to execute a customer friendly process for inquiries regarding involved vehicles.
