On the affected vehicles, the single brake modulator valve may corrode, which during an Adaptive Cruise Control (ACC) braking event, could lead to a brake pull. This may result in a sudden change in vehicle direction due to uneven braking on the front axle increasing the risk of a motor vehicle crash.

The vehicle(s) on the enclosed VIN List are eligible to receive diagnostic software that can check for an emerging failure in the valve and will provide the driver with an in-vehicle alert if detected. A DTNA authorized service facility will install the diagnostic software. The Recall will take approximately one hour and will be **performed free of charge**.
