### INSTRUCTIONS FOR METAL JUNCTION BOX REPAIR WITH GROUND SCREW

1. Disconnect unit from the 120V power source
2. Locate metal junction box with a GFCI receptacle at the Kitchen.
3. Remove faceplate and receptacle (Fig. 1) to expose wires.

4. Install and secure a separate bare ground wire of sufficient length at the green ground screw (Blue Arrow) in the metal junction box (Fig 2).

5. Connect all ground wires together with green wire nut. Ensure the bare ground wire attached to the box passes through the hole in the top of the green wire nut (Fig 3).
6. Connect the bare ground wire coming through the top of the wire nut to the green ground screw (Green Arrow) on the GFCI receptacle (Fig 4).
7. Insert wires back into the metal junction box.
8. Secure GFCI receptacle and outlet face plate to junction box.
9. Turn power back on and validate function of the GFCI receptacle.
10. Repair is complete.

Jayco's sole obligation under our limited warranty is to repair or replace defective materials and/or workmanship deemed our responsibility as determined by Jayco in our sole discretion. Jayco reserves the right to use new and/or remanufactured parts or materials of similar quality to complete any work, and to make parts and/or design changes as appropriate without notice to anyone. Jayco designs and/or materials changes are done without obligation to incorporate such changes in previously manufactured product. Jayco makes every reasonable effort to ensure field remedies will not adversely affect performance and/or safety of the unit. This field remedy is not intended to extend to future performance of this RV, or any of its materials, components or parts beyond the standard warranty period. The RV owner's obligation to notify Jayco, or one of its independent, authorized dealers, of a claimed defect does not modify any obligation placed on the RV owner to contact Jayco directly when attempting to pursue remedies under state or federal law.
