### What is the problem?

The front seat belt pretensioner may deploy abnormally in the subject vehicles, causing the MGG (Micro Gas Generator) to detach from the assembly. An abnormal pyrotechnic pretensioner deployment could cause the pretensioner to explode, and project metal fragments into the vehicle occupant compartment, which may result in injury to vehicle occupants.

All vehicles in the population were also involved in Recalls 211, 219, 220, or 223. Vehicles that have had remedy repairs under the previous recalls will need to have the new remedy completed.
