FL943  
NHTSA # 22V456

Dear NHTSA Recalls Management Division:

Per your request, Daimler Truck North America LLC (DTNA), on behalf of its Freightliner Trucks Division is writing to provide an update on the recall remedy launch for 22V456 / FL943 CASCADIA ABS Fault Retention affecting certain 2022 Freightliner Cascadia vehicles manufactured October 28, 2021, through December 17, 2021, fail to conform to Federal Motor Vehicle Safety Standard No. 121, "Air Brake Systems.", On the affected vehicles, when the vehicle ignition is keyed off for more than 5 seconds, the Anti-lock Brake System (ABS) fault codes will not be retained, which can impair the ABS diagnostic features and warning light. An ABS system that does not store fault codes may fail to warn the driver of an issue, or prevent proper repair. Operating a vehicle that may fail to warn the driver of an issue, or prevent proper repair can increase the risk of a crash.

We believe that clear and timely communication is essential in ensuring the safety and well-being of consumers, and DTNA is eager to ensure both stay informed about the progress of this recall launch. The final repair is currently being validated by DTNA and at this time plans to launch the Recall Campaign on or about June 28, 2024.

Another notice will be mailed to vehicle owners when the final, free remedy is available and will advise vehicle owners to contact their authorized Daimler Truck North America dealer to schedule the repair for their vehicle.

We regret any inconvenience this action may cause but feel certain you understand our interest in motor vehicle safety.

Sincerely,
