USA	2022	2023	ATLAS CROSS SPORT													
			What is the safety concern for Safety Recall 42M2?	The proper tightening procedure at the supplier may not have been performed on the bolts on the driver side (left side) rear trailing arm. The bolts may loosen over time and fall out, or the trailing arm may fracture due to overload around the remaining bolt(s). This could cause excessive movement of the driver side (left side) rear wheel bearing carrier, which can lead to a change in vehicle handling characteristics. If this were to occur there could be a sudden loss of vehicle control. This may increase the risk of a crash.												
			Are there any precautions I should take because my vehicle is part of Safety Recall 42M2?	If the affected bolts loosen, the customer may notice an unusual (knocking) noise from the rear suspension and possibly a change in the vehicle handling. Should this occur, owners are advised to contact an authorized Volkswagen dealer without delay to have the vehicle inspected/repared.												
			What is the repair for the Safety Recall 42M2?	To address this potential issue, your authorized Volkswagen dealer will replace the driver side (left side) rear trailing arm bolts.												
			When will the repair for Safety Recall 42M2 be available?	Repairs for this recall have begun. Please contact your authorized Volkswagen dealer without delay to schedule this recall repair. To set up an appointment online, please visit <a href="http://www.vw.com/find-a-dealer">www.vw.com/find-a-dealer</a> .
