Description of Defect :

Description of the Defect : On certain vehicles, chemical corrosion could affect the functionality of the brake modulator valve, which during an external braking event (including Roll Stability Control or Electronic Stability Control, but not including driver-initiated braking) may result in full system pressure applied to one front wheel end causing a brake pull differential in braking force.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : A full system pressure applied to one front wheel end could lead to a brake pull resulting in a sudden change in vehicle direction due to uneven system

braking on the front axle increasing the risk of a motor vehicle crash.

Description of the Cause : Corroded Front Brake SMVs

Identification of Any Warning that can Occur : Drivers may observe an ABS malfunction light prior to complete chemical corrosion contamination of the modulator valve.
