Part 573 Safety Recall Report

23V-445

Manufacturer Name: Mercedes-Benz USA, LLC

Submission Date: JUN 26, 2023 NHTSA Recall No.: 23V-445 Manufacturer Recall No.: NR

Manufacturer Information:

Manufacturer Name: Mercedes-Benz USA, LLC

Address: 13470 International Parkway

Jacksonville FL 32218

Company phone: 1-877-496-3691

Population:

Number of potentially involved: 143,554 Estimated percentage with defect: 99 %

Vehicle Information:

Vehicle 1: 2021-2023 Mercedes-Benz C300

Vehicle Type: LIGHT VEHICLES

Body Style: SUV Power Train: GAS

Descriptive Information: 28,628 vehicles. The recall population was determined through production records.

Vehicles outside of the recall population have the installed fuel pump impellers that

meet the material requirements.

Production Dates: JUN 01, 2021 - NOV 30, 2022

VIN Range 1: Begin: NR End: NR

Vehicle 2: 2022-2023 Mercedes-Benz CLS450

Vehicle Type: LIGHT VEHICLES

Body Style : 4-DOOR Power Train : GAS

Descriptive Information: 767 vehicles. The recall population was determined through production records.

Vehicles outside of the recall population have the installed fuel pump impellers that

meet the material requirements.

Production Dates: JUN 01, 2021 - NOV 30, 2022

Description of Defect:

Description of the Defect: Mercedes-Benz AG ("MBAG"), the manufacturer of Mercedes-Benz vehicles, has

NR

determined that on certain Model Year ("MY") 2021-2023 GLE/GLS (167 platform), C-Class (205, 206 platform), E-Class (213 platform), S-Class (223 platform), SL (232 platform), E-Class Coupe/Convertible (238 platform), GLC (253 platform), CLS (257 platform), AMG GT 4-doors Coupe (290 platform) and G-Class (463 platform) vehicles, the fuel pump impeller might not meet current

End: NR

specifications in regards to material characteristics.

FMVSS 1: NR FMVSS 2: NR

Production Dates: JUN 01, 2021 - NOV 30, 2022

VIN Range 1: Begin:

Description of the Safety Risk: As a consequence, the impeller might deform and therefore come into contact

with the fuel pump housing, leading to a mechanical resistance. In some instances, this could lead to a shutdown of the fuel pump. As a result, the vehicle could lose propulsion, which could increase the risk of crash or injury.

Description of the Cause: Due to a deviation in the production process of a sub-supplier, certain fuel

pump impellers might not meet the material requirements and thus certain batches of fuel delivery modules might not meet the durability requirements.

Identification of Any Warning Before the fuel pump is switched off, the driver may be made aware of a

that can Occur: malfunction by a warning message in the instrument cluster and might notice

the engine running rough.

Supplier Identification:

Component Manufacturer

Name: Hyundam Industrial Co., Ltd.

Address: 29, Yeongni-gil Yeongin-myeon, Asan-si, Chung Cheong Nam-Do Foreign States Country: Korea, Democratic People's Republic of

Chronology:

In the beginning of June 2022, MBAG launched initial investigations based on individual field reports from outside the US alleging inconsistent power delivery. MBAG hypothesized that, the function of the fuel pump might have been impaired without having any initial indications in regards to common influencing factors on the field cases in this relation. In July 2022, MBAG began retrieving fuel pumps from affected vehicles in the field and analyzing them in coordination with the supplier. Over the next several months, MBAG conducted analyses of the material together with the supplier, as well as the production processes at the supplier and its sub-suppliers. Through the end of the year, MBAG conducted numerous and varied tests in coordination with its tier one supplier, including fuel swelling behavior, structural damage and notched impact resistance tests. In December 2022, these intensive analyses and tests identified an irregularity in individual raw material batches used for the suspect fuel pump impellers, sourced from a sub-supplier. Based on that determination, in January 2023, MBAG's supplier of the suspect fuel pump started investigations to identify the potentially affected vehicle population by tracking the material flow within the multi-supplier chain from the raw material subsupplier up to the fuel pump manufacturer. At the same time, the fuel pump supplier implemented several changes in its production process, including a replacement of the raw material supplier, changing the injection molding process at the injection molding supplier and implementing more quality controls within the supplier chain. Through May 2023, MBAG and its fuel pump supplier conducted further testing and analyses to identify potential influencing factors and determine potential consequences of material and process anomalies at different steps of the production process. Please see chronology supplement attached.

Description of Remedy:

Description of Remedy Program: An authorized Mercedes-Benz dealership will replace the fuel delivery

module on the affected vehicles.

Pursuant to 49 C.F.R. § 577.11(e), MBUSA does not plan to provide notice about pre-notice reimbursement to owners since none of the involved vehicles would have been previously subject to the condition described

and all remain covered under the new vehicle warranty
