Description of Defect:

Description of the Defect: The transmission electric oil pump for the Idle Stop & Go System ("ISG") in the subject vehicles might have been assembled with printed circuit boards ("PCB") that were damaged during manufacturing by the oil pump controller supplier. A damaged capacitor on the pump controller PCB could impact electrical operation leading to heat damage to the electric oil pump circuit board, connector, and wiring harness. The heat damage at the pump increases the risk of a vehicle fire in addition to a potential Controller Area Network ("CAN") communication disruption for multiple onboard controllers.

> FMVSS 1: NR FMVSS 2: NR

Description of the Safety Risk: The electrical heat damage within the electric oil pump assembly increases

the risk of a vehicle fire.

Description of the Cause: The oil pump controller's PCB may have been produced with damaged

capacitors.
