Description of Defect :

Description of the Defect : Certain Taycan high-voltage batteries experience short circuits within the battery modules, which can lead to thermal events and in some cases fires.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : A short circuit in the battery can increase the risk of a thermal event.

Description of the Cause : The root cause is still under investigation. The current analysis suggests that multiple charging events above the upper voltage limit can degrade battery cells and cell-walls and increase the risk of internal short circuits.

Identification of Any Warning that can Occur : There are no warnings.

Involved Components :

Component Name 1 : Cell block module in high voltage battery

Chronology :

In 2021 Porsche became aware of a report of a single vehicle battery fire outside of the U.S. that occurred shortly after charging . Porsche investigated this incident and began obtaining comparable undamaged batteries from the field for analysis. In 2023, Porsche became aware of further instances of battery fires in Taycan vehicles after charging in various markets worldwide. In total, Porsche is aware of one field incident in the United States potentially attributable to the subject issue. The field incident resulted in property damage and no injuries. Porsche is not aware of any other warranty or other claims in U.S. attributable to the subject issue.

Porsche's investigation to date indicates that repeated overcharging can damage battery cells and eventually lead to short circuits, creating the risk of thermal events and fires. Although Porsche is still investigating the root cause of this issue, on 6 December 2023 it determined that a safety-related defect exists in the subject vehicles.

Description of Remedy :

Description of Remedy Program :	The HV Battery will be checked and affected modules will be replaced. The owner's letter will advise that Porsche offers a reimbursement for pre-notification remedies in accordance with 49 CFR 573.13.
How Remedy Component Differs from Recalled Component :	The vehicles were identified by machine-learning to determine affected clusters in production. Telematics data from vehicles in the field also show real-time battery performance (charge/discharge performance) anomalies in batteries built during the identified clusters. The analysis of the root cause for this issue is ongoing, and this report will be updated as necessary.
Identify How/When Recall Condition was Corrected in Production :	Vehicles produced after June 22, 2023 are not subject to this recall. The analyses of the root cause for this issue is ongoing.
