Description of Defect :

Description of the Defect : The fuel pump impeller was improperly moulded, resulting in low density impellers. Over time, the low-density impeller can deform and interfere with the fuel pump body, rendering the fuel pump inoperative.

FMVSS 1 : NR

FMVSS 2 : NR

Description of the Safety Risk : If the fuel pump module is inoperative, the engine may not start or can stall while driving, increasing the risk of a crash or injury.

Description of the Cause : The fuel pump impeller was improperly moulded, resulting in low density impellers. If the surface of a lower density impeller is exposed to production solvent drying for longer periods of time, surface cracking may occur. These cracks may lead to excessive fuel absorption, resulting in impeller deformation, interference with the fuel pump body, and, possibly, an inoperable fuel pump.

Identification of Any Warning that can Occur : Warnings may include illumination of the Malfunction Indicator Lamp (MIL), and intermittent loss of power, difficulty starting, or stalling of the vehicle.

Description of Remedy :

Description of Remedy Program : Registered owners of all affected vehicles will be contacted by mail and asked to take their vehicle to an authorized Honda or Acura dealer. The dealer will replace the fuel pump module with an improved part.

Owners who have paid to have these repairs completed at their own expense may be eligible for reimbursement, in accord with the recall reimbursement plan on file with NHTSA.

How Remedy Component Differs from Recalled Component : Remedy parts have impellers with greater density and expanded clearance between the impeller and fuel pump body.
