Subject: Dealer Notification Letter

You are receiving this email because Capacity delivered a truck to you that has the POSSIBILITY of recall component.

On 12/12/2022, Meritor received notice that a pro-torque spindle nut keeper was observed to be not installed correctly on the pro-torque nut wheel-end. After further research, they found 52 axles that were sold to Capacity were affected and are in the field. 51 were built and shipped in 2020. The last one was built in 2022. Meritor has provided a list of suspect serial numbers and I have added the Capacity truck numbers that coincide with those serial numbers. All the units listed are FedEx Freight Sabre units.

Meritor will provide work instructions as well as cover the cost of these repairs.

Pursuant to NHTSA regulations and as this is a potential safety issue; please use all means available to you in identifying where these trucks are operating and notifying the owners/operators of this situation and to determine if the truck they have has been affected.

Capacity recall# is 23V219.

Don't hesitate to contact me, should you have any questions.

Thank you,

CaSandra "Sandy" Brown
Warranty Supervisor
